

With the utmost enthusiasm, I would like to express my interest in the Full Stack Engineer position at Myagi. My interest in creating beautiful things has taken me from business entrepreneurship to engineering. I believe that my passion for creating beautiful solutions, a strong commitment to maintaining code quality, and interest in constant learning make me an ideal candidate to join the engineering team at Myagi.

As a candidate, here's what I could immediately bring to the table:

An effective problem solver: In my role at Zeus Motors, I built a vehicle profit estimation tool which assisted in generating over \$1 million gross sales in the first year. I was also able to showcase my problem-solving abilities as a team-lead in GuideMe project by implementing a chat feature which enabled users to contact with tourist guides.

A disciplined coder: I have always displayed my careful approach to code quality by doing extensive debugging and conducting code reviews. At Lambda School, I frequently review students' code and give feedback to improve quality by Agile approach. In addition, by using pure components in my React projects, I increase the performance as it reduces the number of render operation in the applications, which further shows my dedication to the code quality and performance.

A passionate learner: Everything I have engaged in so far has all been driven by my keen interest in constantly learning. Even as a teaching assistant role at Lambda School, I learned SQL as the school switched from MongoDB. Facing new languages or technologies always excites me as it gives me an opportunity to broaden my stack.

I look forward to contributing my skills and experiences to the Full Stack Engineer position at Myagi and hope to have the opportunity to speak with you further about how I can be an asset to your team.

Sincerely,

Erinç Emer
